

Empowering  
sustainability and  
easing the  
transition

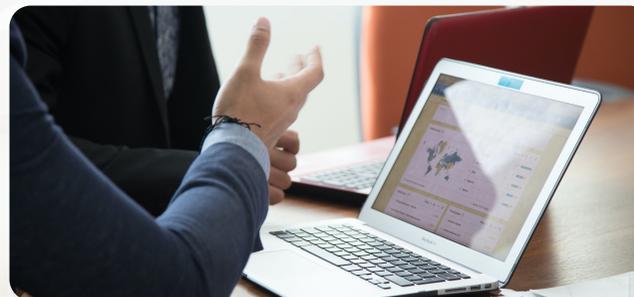

GreenON - A digital service that empowers corporates to demonstrate progressive efforts and verifiable impacts of sustainability

### Measuring the Impact

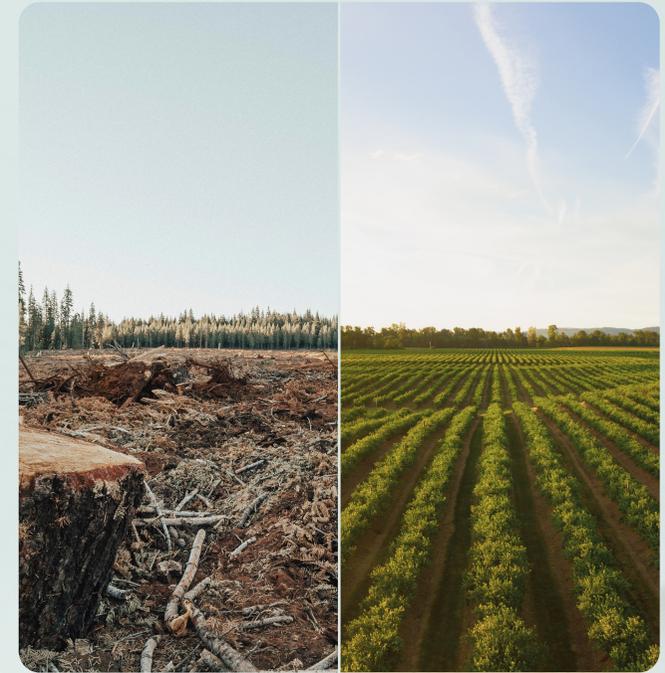

- Supports different sustainability reporting frameworks
- Supports customised data models
- Integrates with ESGpedia

### Transitioning

- Track project KPIs
- Access funding to scale projects
- Share updates with stakeholders 24/7

### Verifiable Disclosure with Credentiailling

While projects can be data-rich, they have a **poor availability of verified data**, especially from their supply chains. As a result, corporates **lack strong support and sponsorships** to scale projects beyond pilots.

GreenON aims to **enable the disclosure** to allow corporates to **gain sponsorships and/or financing** from financial institutions.

## Pain Points

**High barriers to sustainability** due to complex ESG frameworks.

**Duplicate efforts** in sustainability reporting to multiple stakeholders

**Lack of supply chain visibility** to track emissions for the larger corporates

## Solutions

**Configurable** data templates to streamline sustainability reporting

**Re-usable** data for multiple stakeholders

**Verifiable and explainable** scope 3 data

## Configurable Templates:

GreenON's Template Builder allows corporates to create different templates based on their respective frameworks. The templates can then be applied to various projects for monitoring, reporting, sponsorship and financing purposes.

The screenshot displays a multi-step form for creating a template. The steps are: Template Details, Project Information, Programme Information, Location, and Agriculture Info. The 'Project Information' step is currently active, showing fields for Project Name, Start Date, End Date, Project Owner, Description, and Programme Owner. The 'Location' step shows dropdown menus for Country, Province, and District, along with a field for Product or Produce. A 'Next' button is visible at the bottom of the form.

### About Project

Bumi Alam intends to start by managing a defined conservation area located at the fringe of Taman Negara known as the Dungun Forest Complex which has documented tiger sightings.

Taman Negara is the only park in Southeast Asia where camera-trapping surveys conducted more than 10 years apart have confirmed that biodiversity has been maintained.

Outcome:

NDPE | Protect Wildlife | Reduce Encroachment

Status:

Seeking Sponsorship

Verifiable Monitoring:

Half-Yearly

### Highlights

Start by managing a defined conservation area located at the fringe of Taman Negara known as the Dungun Forest Complex which has documented tiger sightings.
